PORT CANAVERAL, FLORIDA
Project Highlight

Installation 1976
35 years in service

Project for Cape Marina

Features 115 slips
19,000 sq. ft
Combination fixed and floating
Aluminum Decking

Project Summary

Cape Marina was one of the first marinas built with GatorDock™ products. This three and a half decade old dock system is still in service; even the decking is original. Cape Marina experiences heavy traffic all through the year as it is a prime launch site for day trips and to watch space shuttle launches. In 2007 the marina choose GatorDock™ to expand their system to include a fuel station. The Pontoon Float Dock add-on was easy to plan for and install given the easily accessible utility bays and channels that run from dock section to dock section.
