

CALADESI ISLAND STATE PARK

DUNEDIN, FLORIDA
Project Highlight

Installation	1991
Project for	State of Florida Dept. of Environmental Protection
Features	Pontoon Floating Dock System 100 slips Aluminum Decking Ferry Loading/Unloading Area

Project Summary

Caladesi Island State Park, an intercoastal barrier island, chose GatorDock's™ Pontoon Floating Dock System and a seawall constructed with Gator Aluminum Sheet Piling. The seawall surrounding the marina was constructed to prevent erosion and support the protected natural habitat with an environmentally friendly product. Our long-life cycle product was the perfect choice to create a cost effective, salt water solution that has endured many strong storms throughout its many years. Additionally, the project was custom designed to include accessibility for ferries and their passengers.
