

MARCO ISLAND

PRIVATE RESIDENCE
Project Highlight

Installation	2008
Project for	Private Residence
Features	Single Boat Design Poly-Tub Floating Dock DRII Gangway Composite Decking Fish Station Utility Station Ladder for Water Access

Project Summary

The homeowner on this project resided on a saltwater canal on Florida's Marco Island. Even though all of our client's neighbors had fixed docks, our client wanted floating to ensure access regardless of tides and water levels. This single homeowner dock was designed with several custom options and fully wired for utilities. Our designers and project managers worked with the homeowner and contractor from start to finish and through many obstacles to ensure this GatorDock™ met the client's needs, as well as permit requirements.
